Overview of the Company

The hotel offers modern accommodations, exceptional dining experiences, meeting and event facilities, a swimming pool, a fitness center, and other premium amenities. Seda Nuvali is dedicated to providing outstanding guest experiences through warm Filipino hospitality, excellent customer service, and a strong commitment to sustainable tourism and environmental responsibility. Seda Nuvali features a total of 356 well-appointed guest rooms, including 206 guestrooms and suites in its newest tower. Guests can enjoy stunning views of the lake and lush natural landscapes, creating a peaceful, resort-like atmosphere within the vibrant NUVALI community. The hotel's family-friendly amenities and contemporary facilities make it a preferred choice for vacations, business trips, conferences, and special events. Conveniently located approximately 45 minutes from Makati City and Ninoy Aquino International Airport (NAIA), Seda Nuvali also provides easy access to key business districts such as Laguna Technopark and Nuvali Techno Hub, as well as nearby attractions including Monochrome Events Place, shopping outlets, restaurants, and various lifestyle destinations. Through its strategic location, quality accommodations, and commitment to service excellence, Seda Nuvali continues to be one of the leading hospitality destinations in Southern Luzon.

Vision

To be the leading hotel brand synonymous with Filipino hospitality and seamless experiences.

Mission

Weaving Filipino hospitality and service excellence to create meaningful memories.

Company Background

Seda Nuvali is part of Ayala Land Hotels and Resorts Corporation (AHLRC), the hospitality arm of Ayala Land, Inc., one of the Philippines' leading real estate developers. The hotel officially opened in 2014 and is the first Seda property established outside Metro Manila. It is strategically located within NUVALI, Ayala Land's premier eco-city development in Santa Rosa, Laguna, making it an ideal destination for both business and leisure travelers.

Discussion of the Nature of Tasks

During my OJT with Seda Nuvali Hotel, I've experienced work from roles such as a Level 1 IT Support, Network and Infrastructure Support, and as a System Administrator. I've learned and started implementing these specific roles into my OJT with the guidance of my supervisors.

Level 1 IT Support:

- **Device Troubleshooting** – I was guided at first on how to troubleshoot things such as troubleshooting desktop PCs, guestroom and department telephones, software issues, and scanners and printers. At some points I was able to handle them by myself.
- **Recycling and Upgrading PCs** – At points in my OJT times, my project was to salvage old non-working PC parts and recycle the parts to be used on other possible old working PCs. This was done for their donation project, and I was the one to handle the building of it. I was first guided basic troubleshooting if it is still recyclable until I can distinguish it and know what to replace and what are needed.
- **Upgrading & Replacing Setups** – I was able to replace and upgrade different peripherals during my OJT such as a UPS, a guestroom telephone, and Basic PC needs such as Keyboards. I was also able to experience to upgrade PCs to SSDs and updating it to Windows 11.
- **Point-of-Sale (POS) Support** – I was guided on how to add items to their POS and new discounts to it.
- **Guest & Staff Support** – I was able to help with guiding guests of the hotel and employees themselves with their concerns related to tech such as software issues, telephone sound issue, hardware issues, etc.

Network and Infrastructure Support:

- **Access Point Deployment/Replacement/Troubleshooting** – During events, I was tasked with setting up the Access Point near the area. While for some guest rooms with Network Issue, we tend to visit the room with the AP setup and troubleshoot if the cable needs replacement or are there other issues.
- **High-Speed Internet Access Setup** – When guest or employees request to have access were approved, I was tasked to get their MAC address and manually input it and give what bandwidth is needed or approved.

- **Domain Configuration** – When reinstalling or setting up new PCs for Employees, I was tasked to setup the PCs configuration (IP Address, Subnet Masks, and the DNS) to be able to connect and add it to the domain.
-

System Administration:

- **Active Directory Management** – When users tend to forget their password, I was tasked to use the Active Directory to reset said user's password.
- **Update Biometrics Logging System** – I was assigned to update all employees' biometric data to properly encode their codes, name, and positions.
- **Access Control/Keycard Encoder** – I am usually the one tasked to encode or update what other employees request for specific room keycards whenever possible and approved.

Software Used

- **SARA Hotel Operation Mobile Application** – Main ticketing system of the hotel.
- **SARA Web Dashboard** – Web version of the Mobile Application, mostly used for PC/Desktops.
- **SARA Configuration Portal** – Configuration/Admin side of the Ticketing System.
- **Shiji Infrasy** – POS System of the hotel.
- **Microsoft Outlook** - Main emailing system used by the hotel.
- **Microsoft Onedrive** – used for storing data/files on a cloud setup.
- **Microsoft Excel** – used for logging things accomplished (Ex. Setting up PSU)
- **Windows Disk Cleanup** – used for cleaning old window files/logs/temp files.
- **Viber** – Main communication system used by the hotel.
- **Jurudata System** – System that monitors the telephones connections if it is up and active.
- **Infrasy System** – Systems that monitors if POS is working properly.
- **ADEL Lock System** – Door Lock management system to check if it's working properly.
- **Internet System** – To monitor internet for its uptime and activeness.
- **Check SCM (Supply Chain Management)** – Inventory system to track and audit orders.
- **Broadyun HSIA (High-speed Internet Access)** - used for managing Wi-Fi access codes, assigning bandwidth, etc.
- **eForms** – used as Digital Request Form.
- **NAS (Network Attached Storage) Backup Storage** – Network Storage System usable in every PC connected to the domain and Wi-Fi.
- **SUN System AWS VPN** – Private Encrypted VPN for secure connection.
- **Active Directory** – Microsoft's management software for managing different user accounts within a domain.
- **Command Prompt** - used for diagnosing network connections and running specific commands and features.

- **Windows Settings and Control Panel Configurations** - used for configuring different settings of a Windows OS ran desktop.
- **PABX** – used for configuring and tracking of configured telephones within the Hotel.
- **Epson Maintenance** - Used for running diagnostic test, print-head alignment, and cleaning for an Epson Printer.
- **ManageEngine Endpoint Central** - used for remoting to a PC.
- **Touchlink Time Recorder 3** – used for attendance and logging of Employees.
- **Alcatel-Lucent Attendant Console** – used for monitoring/logging and receiving calls for GSC (Guest Service Center)

Hardware Used

- **Keycard Programmer/Encoder** – used for encoding data to a keycard.
- **Network Access Point** – hardware to extend Wi-Fi signal.
- **IP Telephone** – Configured telephone base on an IP for the hotel.
- **IP and Wired Printers** – Different sets of printers used by each department (Some are shared which is why they use IP/Wireless Printers).
- **Alcatel Telephone** – Specific telephone mainly used by the Guest Service Center.
- **PC** – Desktop computers used by each department and guest facilities.
- **Crimping Tool** – used for connecting wires to the ethernet or telephone jacks.
- **Network Cables (RJ11, RJ45)** – used for connecting to the network or phone lines.
- **Network Cable Tester** – used for troubleshooting if cable or wire is functioning properly or if need crimping another one.
- **Basic Tools (ex. Screwdriver, Scissors, Tape)** – used for daily basis such as logging, disassembling, securing wires, etc.
- **Flash Drive** – used for OS installation or for storing files to be used by other departments/guest rooms.
- **PC Components** – Internal and External hardware used or recycled to be used on other PCs (Internal ex: RAM, CMOS, HDD. External ex: Keyboard, Mouse, Monitor, PSU).
- **Universal Remote Controllers (For TVs)** – used for configuring their TV setups for Guest Rooms, Facilities, Lobby Area TVs, etc.
- **Wire Tracer** – used for tracing on which wire is one connected to (Ex. Guest Room telephone to be traced on the Auxiliary room).
- **Docking Stations** – a multiple port hub used for connecting peripherals.
- **Tablets** – Mobile device which was mostly used to advertise or give news about certain events within the hotel.
- **Fingerprint Readers** – mostly used for identification and logging of Staff Clock in and Clock outs.

Practicum Outputs

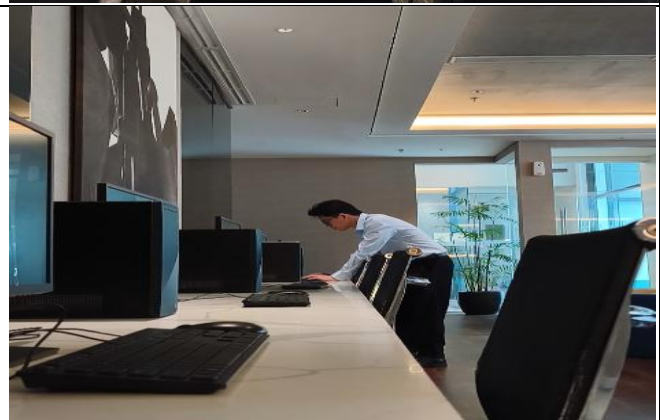

For practicum outputs, most of my outputs were related to being able to do tasks on my own. Such as Configuring PCs and being able to deploy them, Proper Maintenance of specific facilities and systems, and being able to successfully handle tickets.

I was able to finish configuring, recycling, and upgrading PCs for one of the hotel's projects of Donating older usable PCs. I ended up with 15 PCs done and ready for donation. Said PCs were first troubleshooted if they were still bootable, then formatted to remove potential confidential files or replaced old HDD and upgraded to a clean SSD and then installed the Windows OS and set it up for it to be ready to use.

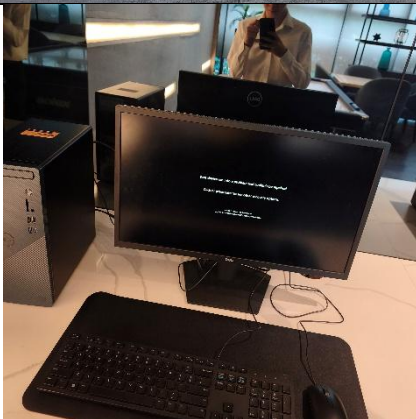

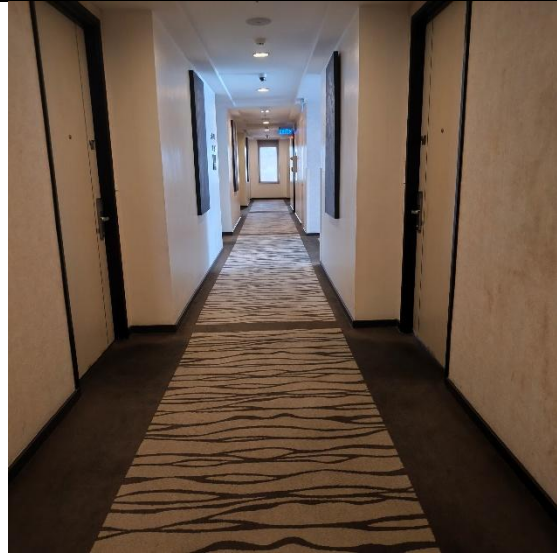

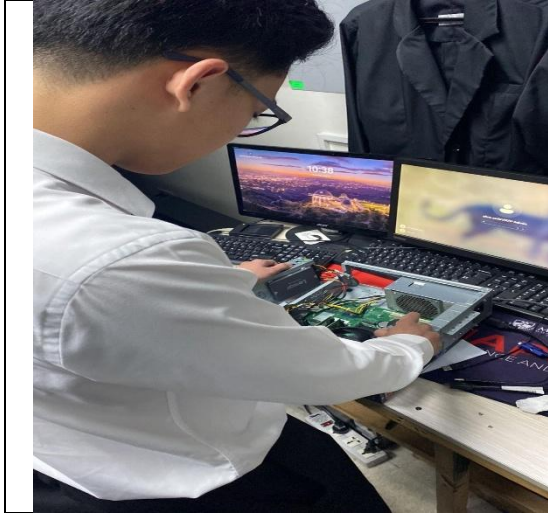

For proper maintenance, I was tasked to always monitor the game room PCs, the auxiliary rooms, and Servers/Systems. Everyday I would monitor each from Game Room PCs' storage, Windows Update, and Possible Issues. I would then check the Auxiliary Rooms if there were any Systems that are currently turned off or down. Lastly, I would end up checking the Servers/Systems within the IT room for their Uptime or Issues within it too.

Lastly, for handling tickets, I was able to handle some tickets on my own such as Employee/Guest Concerns. Examples of what I've accomplished on those times were handling software/hardware error for Employees and handling Setups for Guest Rooms.

Synthesis of Practicum Engagement

During my 486 Hours of OJT at Seda Nuvali Hotel, I was able to experience three different aspects of IT, which are being an IT Support, a Network Administrator, and a System Administrator. Throughout this Practicum, I was able to support both guests and employees with Tech related issues, was able to setup and configure workstations to be added to the domain and was also able to manage and update the data of their system. This practicum gave me an opportunity to learn what it's like to be part of the IT industry.

Most of my time spent in Seda Nuvali was related to my Daily Routine Check, Day by Day I would check if their Systems were up and running, check for possible power issues, checking accessibility of the NAS, checking internet connectivity within guest areas, maintaining the game room's desktops, and checking each Auxiliary Room per floor of the hotel. Through this I was able to catch potential issues that may hinder hotel operations. With it I understood that proper maintenance can save you a lot of time instead of fixing it when it's broken, because there were some scenarios that actually happened.

Outside of my daily routine checks, I was able to handle concerns by both guests and employees, where such example is their telephone doesn't ring or has no sound, I was able to troubleshoot it with the guide of my supervisors through their mentoring on proper troubleshooting such as checking whether it lights up or does speaker mode have no sound. Another was being able to manage and update employee data/biometrics and keycards. While for the networking side, I was able to setup workstations to be added to the domain, assign bandwidth for specific users, and troubleshoot potential access point issues. With the help of my supervisors and staff, I was able to at least handle some of the problems/concerns that each department or guest had, I was able to have more confidence on troubleshooting on my own and experience what it's like in those roles.

Looking back on my time as an OJT at Seda Nuvali Hotel, I was able to learn and grow through them and helped me understand more what it's like working in the IT Industry, especially related to hospitality, it helped me apply theoretical knowledge into real life scenarios and was able to fully enjoy my time with them. This practicum furthered my knowledge and experience especially in the technical side and would be a starting foundation on what I can apply in the future.
